North Coast Region

MONITORING AND REPORTING PROGRAM NO. R1-2005-083

FOR

INTERNATIONAL PAPER COMPANY
FORMER MASONITE WOOD TREATMENT FACILITY
Cloverdale

Sonoma County

This Monitoring and Reporting Program is issued pursuant to California Water Code Section 13267(b) and requires monitoring of groundwater and submission of technical reports. Reports are required on a semiannual basis. The objective of monitoring conducted under this monitoring program is to provide the Discharger and the Regional Water Board with information concerning groundwater quality and contaminant trends at the site.

Under the authority of the California Water Code Section 13267, the Discharger named above is required to comply with the following:

Monitoring

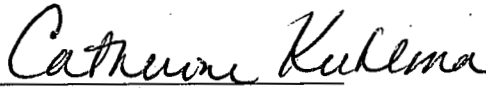

1. The depth to groundwater in each monitoring well shall be determined to at least 0.01-foot increments semiannually. The groundwater elevation shall be computed by subtracting the measured depth from the well top elevation reference point, both of which should be reported. The data generated from the elevation readings must be referenced to mean sea level.
2. The following monitoring wells shall be sampled for the constituents in accordance with the schedule described below. Each well shall be measured in the field (or by a certified laboratory) for dissolved oxygen, pH, groundwater temperature, oxidation-reduction potential, and conductivity.

Well ID	Arsenic	Pentachlorophenol	Dissolved Iron	Chloride
MW-6	Semiannual			
MW-12	Semiannual	Semiannual	Semiannual	Semiannual
MW-13		Semiannual		Semiannual
MW-14				Semiannual
MW-23		Semiannual		
MW-25		Quarterly		
MW-26		Quarterly		
MW-27		Quarterly		
Domestic Well		Quarterly		

Reporting

1. A groundwater elevation contour map shall be submitted for each set of measurements and include the facility groundwater flow pattern including the direction of the groundwater gradient, and the location of the wells measured.
2. Groundwater monitoring well sampling shall be submitted semiannually and shall include a map of the facility indicating the groundwater flow direction and the location of all monitoring wells. The analytical data sheets shall be summarized in tabular form illustrating the date, the constituents, the monitoring well elevation, and the concentrations of the constituents.
